PROFESSIONAL SUMMARY

Software Engineering Technology graduate focused on AI-enabled software with experience building a terminal-based coding agent and distributed applications. Strengths include integrating LLMs with filesystem and shell tools and designing systems for persistence and failure recovery. Can help build tools that automate technical workflows and handle operational complexity.

EDUCATION

Software Engineering Technology Completed 2026 | GPA: 3.5/4
Conestoga College, Waterloo, ON

KEY PROJECTS

Cogent | TypeScript, Node.js, LLMs
Terminal-Based Autonomous Coding Agent

- Developed a terminal-based coding agent integrating Gemini and Groq models with filesystem and shell tools through a unified streaming interface.
- Designed an autonomous read-act loop with context compaction, session persistence, and provider-agnostic tool execution for interactive and batch workflows.

Exchange Stack | TypeScript, Redis Streams, PostgreSQL, WebSockets, Docker
Cryptocurrency Exchange with High-Performance Matching Engine

- Built a centralized cryptocurrency exchange supporting spot and perpetual markets with a high-performance in-memory matching engine, price-time priority, and real-time WebSocket updates.
- Designed a 6-service event-driven architecture using Redis Streams, WAL + snapshot recovery, and PostgreSQL audit trails for durable order processing and sub-second restarts.

Runexus | TypeScript, Kubernetes, Redis, Express, Docker
Distributed Workflow Orchestration Engine

- Engineered a distributed workflow orchestration engine that executes DAG-based jobs across Kubernetes runner pods with parallel scheduling and Redis-backed queues.
- Implemented heartbeat monitoring and watchdog-based failure detection, guaranteeing deterministic workflow completion and automatic handling of pod failures.

DayFlow | TypeScript, React 19, Express 5, Prisma, PostgreSQL, Redis, BullMQ, Firebase
Smart Calendar with Cross-Platform Sync and Smart Notifications

- Built a full-stack smart calendar unifying events, tasks, location services, and weather forecasts in one interface, with Google and Microsoft Calendar OAuth2 sync processed by Redis-backed BullMQ background workers.
- Implemented smart notifications through Firebase Cloud Messaging and email with scheduled reminder jobs, email-based event invites with RSVP handling, and schedule-conflict detection surfaced directly in the calendar view.

TECHNICAL EXPERIENCE

Shift Leader, Canna Cabana, Kitchener **May 2025 - Present**

- Achieved Top 1% performance industry-wide by completing all Spiffy training modules and ranking #14 of 1,248 associates on the Canna Cabana leaderboard and #88 across the entire cannabis retail industry, demonstrating exceptional product knowledge and sales execution.
- Selected for the High Buds Club based on sustained sales performance, earning multiple prizes and product incentives from licensed cannabis producers and brand partners.
- Coached and motivated team members through real-time floor leadership and side-by-side customer service modeling, boosting team conversion rates by 20% and lifting average transaction value by 12% within two quarters.
- Promoted from Sales Associate to Shift Leader within 6 months based on consistently exceeding sales KPIs, demonstrating strong business acumen, and showcasing leadership readiness on the sales floor.

Field Service Technician, IBM, Toronto **Jun 2024 - Jul 2024**

- Assisted with IT setup for 50+ workstations during HSBC to RBC bank migration, enabling a smooth infrastructure transition with minimal downtime.
- Managed deployment tracking via Excel for 100+ devices, improving coordination across departments.
- Installed network hardware including UniFi and Cisco devices, enhancing long-term performance and reducing troubleshooting needs.
- Delivered peer training to 20+ colleagues on troubleshooting techniques and reducing support requests.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C++, C, Java, SQL, Rust
Web Technologies: Next.js, Node.js, GraphQL, REST APIs, WebSockets, Prisma, Supabase, Appwrite
Databases & Cloud: PostgreSQL, MongoDB, Redis, Docker, AWS, GCP, Nginx, CI/CD, Kubernetes
Developer Tools: Git, GitHub, VS Code, Postman, Firebase, Vercel, Cloudinary, Render, AWS, GCP
